<https://lowtechlab.org/>

- Utile
- Accessible
- Durable

A close-up photograph of a wooden grid beam joint. Two light-colored wooden beams are joined at a right angle. The top beam has several circular holes along its length. The bottom beam is thicker and has two circular holes. A single black screw is visible, protruding from one of the holes in the top beam and partially inserted into the bottom beam. The wood grain is clearly visible.

Space Exploration -> Interviews

An Interview with Alan Bean

By Jim Plaxco

On the afternoon of October 3, 1992, I had the privilege to sit and speak, all too briefly, with Alan Bean, Apollo 12 Lunar Module Pilot, 4th man to walk on the Moon, Commander of the 1973 Skylab 2 mission, and renowned space artist. The following is a transcription of that conversation.

JP: Approximately how many paintings have you done?

The screenshot shows the YouTube homepage with a dark theme. At the top, there's a search bar and navigation links for 'Accueil', 'Vidéos', and 'Chaines'. On the right, it shows 'fredzoneblog' and other account options. A yellow banner at the top right says 'Ajouter une vidéo'. Below the header, a section titled '"Feather" Beta' is highlighted with a yellow background. It contains text about the project's goal of low latency and mentions it's an opt-in beta. There's also a note about comments being used to improve the service. A link 'Leave the "Feather" Beta' is present. The main content area has a large, empty search bar and a 'Rechercher' button. At the bottom, there's a footer with links to various YouTube services like YouTube, Programmes, Aide, Règles, and Découvrir, along with links to mobile, website, and television versions of YouTube.

▲ Tell HN: Thank you for not redesigning Hacker News

1831 points by ramphastidae 8 months ago | hide | past | web | favorite | 390 comments

I'm currently in a country with low speed internet and the entire 'modern' web is basically unusable except HN, which still loads instantly. Reddit, Twitter, news and banking sites are all painfully slow or simply time out altogether.

To PG, the mods and whoever else is responsible: thank you for not trying to 'fix' what isn't broken.

Thank you for not trying to

This is a motherfucking website.

And it's fucking perfect.

Seriously, what the fuck else do you want?

You probably build websites and think your shit is special. You think your 13 megabyte parallax-ative home page is going to get you some fucking Awwward banner you can glue to the top corner of your site. You think your 40-pound jQuery file and 83 polyfills give IE7 a boner because it finally has box-shadow. Wrong, motherfucker. Let me describe your perfect-ass website:

- Shit's lightweight and loads fast
- Fits on all your shitty screens
- Looks the same in all your shitty browsers
- The motherfucker's accessible to every asshole that visits your site
- Shit's legible and gets your fucking point across (if you had one instead of just 5mb pics of hipsters drinking coffee)

Well guess what, motherfucker:

You. Are. Over-designing. Look at this shit. It's a motherfucking website. Why the fuck do you need to animate a fucking trendy-ass banner flag when I hover over that useless piece of shit? You spent hours on it and added 80 kilobytes to your fucking site, and some motherfucker jabbing at it on their iPad with fat sausage fingers will never see that shit. Not to mention blind people will never see that shit, but they don't see any of your shitty shit.

You never knew it, but this is your perfect website. Here's why.

It's fucking lightweight

This entire page weighs less than the gradient-meshed facebook logo on your fucking Wordpress site. Did you seriously load 100kb of jQuery UI just so you could animate the fucking background color of a div? You loaded all 7 fontfaces of a shitty webfont just so you could say "Hi." at 100px height at the beginning of your site? You piece of shit.

This is *still* a motherfucking website.

```
▼<style type="text/css">
body{
    margin:40px auto;
    max-width:650px;
    line-height:1.6;
    font-size:18px;
    color:#444;
    padding:0 10px
}
h1,h2,h3{
    line-height:1.2
}
</style>
```

And it's more fucking perfect than the last guy's.

Seriously, it takes minimal fucking effort to improve this shit.

7 fucking declarations.

That's how much CSS it took to turn that [grotesque pile of shit](#) into this easy-to-read masterpiece. It's so fucking simple and it *still* has all the glory of the original perfect-ass website:

- Shit's *still* lightweight and loads fast
- *Still* fits on all your shitty screens
- *Still* looks the same in all your shitty browsers
- The motherfucker's *still* accessible to every asshole that visits your site
- Shit's *still* legible and gets your fucking point across

And guess what, motherfucker:

You never knew it, but it's easy to improve readability on your site. Here's how.

Let it breathe

Look at lines 1 and 2 of some shitty website you're building. Assuming they're not married they probably shouldn't be humping. The defaults are trash -- pick a minimum line-height: 1.4 for body copy. Headings should be tighter. If you can't see that...piss off.

Les Wikis

Wikipedia

<https://fr.wikipedia.org>

The screenshot shows the French Wikipedia homepage. At the top right, there are links for "Non connecté", "Discussion", "Contributions", "Créer un compte", and "Se connecter". Below that is a search bar with the placeholder "Rechercher dans Wikipedia" and a magnifying glass icon. The main header features the Wikipedia logo and the text "Wikipédia L'encyclopédie libre". To the right of the header, there are links for "Version pour appareil mobile", "Accueil de la communauté", "Portails thématiques", "Principes fondateurs", and "Sommaire de l'aide". A "Comment contribuer ?" link is also present. The central content area includes a "ARTICLE LABELLISÉ DU JOUR" section about "Mia Khalifa" with a small thumbnail image of her. To the left, there is a sidebar with various navigation links such as "Accueil", "Portails thématiques", "Article au hasard", "Contact", "Contribuer", "Débuter sur Wikipédia", "Aide", "Communauté", "Modifications récentes", "Faire un don", "Outils", "Pages liées", "Suivi des pages liées", "Téléverser un fichier", "Pages spéciales", "Lien permanent", "Informations sur la page", and "Élément Wikidata".

Tiddly Wiki

<https://tiddlywiki.com/>

The screenshot shows the TiddlyWiki interface. At the top, there's a header bar with tabs for "GettingStarted", "Contents", and a search bar. Below the header, the main content area displays a tiddler titled "HelloThere" with the creation date "19th April 2020 at 6:08pm". A "TableOfContents" button is visible. The main text in the tiddler reads: "Have you ever had the feeling that your head is not quite big enough to hold everything you need to remember? Welcome to TiddlyWiki, a unique non-linear notebook for capturing, organising and sharing complex information. Use it to keep your to-do list, to plan an essay or novel, or to organise your wedding. Record every thought that crosses your brain, or build a flexible and responsive website." Below the text, there are several thumbnail images linking to different parts of the wiki, such as "Introduction to TiddlyWiki", "A Gentle Guide", "What's New in 5.1.22", "TiddlyMap Plugin", "Helping TiddlyWiki", "Developers", and "TiddlyWiki Classic". On the right side of the screen, there's a sidebar titled "TiddlyWiki" with the subtitle "a non-linear personal web notebook". It includes a search bar, a "+" button, and a list of open tiddlers: "HelloThere", "GettingStarted", "Community", and "close all".

Climate Change 2.0

"No problem can be solved from the same level of consciousness that created it."

Albert Einstein (1879 - 1955) Physicist & Nobel Laureate

Climate Change 2.0 is being developed from a vision of a collaborative application of [Web 2.0](#) methodologies to the global climate change crisis and incorporating a commons-based open source, Creative Commons climate. **Climate Change 2.0** is based on the recognition of the vital contribution that the combination of the economics of information and information and communications technologies (ICT) can contribute – and already are contributing – to addressing what is increasingly recognized as the greatest challenges to a sustainable common future, both through the power of the technologies and through the progressive discovery and realization of the fundamental properties and nature of a digital knowledge-based universe and the accompanying profound freedoms and transformation of human consciousness and the emergence of digitally-connected global civil society that has been growing rapidly since the early stages of preparations for the 1992 Earth Summit - of which the [United Nations Framework Convention on Climate Change](#) was a key component.

The Interlocking Crises

Until recently, the planet was a large world in which human activities and their effects were neatly compartmentalized within nations, within sectors (energy, agriculture, trade), and within broad areas of concern (environment, economics, social). These compartments have begun to dissolve. This applies in particular to the various global 'crises' that have seized public concern, particularly over the past decade. These are not separate crises: an environmental crisis, a

Wiki

The screenshot shows a dark-themed web page for the SourceHut installation guide. At the top right are 'Log in' and 'Register' links. The title 'Installation' is at the top left, with tabs for 'article' (which is selected), 'source', and 'history'. Below the title is a paragraph of text about sr.ht being a distributed system. A 'Table of Contents' section follows, listing numbered steps and their sub-links. Step 3, 'Installing SourceHut services', has several sub-links including 'sr.ht core', 'meta.sr.ht', 'Service configuration' (with 'Service keys' and 'Mail configuration'), and 'Database Configuration' (with 'Schema Upgrades', 'Upgrade procedure', and 'Start the daemons').

sourcehut

Log in — Register

Installation article source history

sr.ht is a distributed system. Each service, such as git.sr.ht and builds.sr.ht, runs independently, with its own database and resources. They communicate with each other using mainly their respective APIs and webhooks, and are mostly tolerant to the temporary or permanent absence of their peers. The system is fairly complex, and is designed more for deployment at scale than for small-scale installations. However, you can choose a subset of these services to install as your needs demand, and it will work correctly.

Accessibility through simplicity

<https://sourcehut.org/blog/2020-05-27-accessibility-through-simplicity>

May 27, 2020 by Drew DeVault

Achieving accessibility through simplicity

I have received many emails complimenting SourceHut's simple design and lightweight pages¹, but I have received a surprising amount of positive feedback from a particular group of users: the blind community.

For many software teams, especially web developers, accessibility is an extremely burdensome task. Many companies have written checks with an uncomfortable number of zeroes on them to get the job done. Sprinkling [ARIA tags](#) all over your DOM to annotate elements with their purpose, and updating these as your DOM changes over time, is no small task, and makes your code more difficult to maintain. It's not especially surprising that many blind users are constantly frustrated when trying to use the web.

How did SourceHut make such an accessible website, even in the face of these trials? In truth, even though accessibility is important to me, I haven't worked especially hard to make SourceHut accessible — I have devoted no more than three or four hours, in total, explicitly towards accessibility. Instead, SourceHut is accessible because the core principles of simplicity upon which it is built naturally lead to an accessible design. We're here today to share our thoughts so that you might apply the same principles to your own website.

First, consider the audience you're designing for. Your users have a diverse set of abilities, and a varied approach to accessibility is necessarily required to accommodate for them. Different users will

Simplicity improves performance and reliability

<https://sourcehut.org/blog/2020-04-20-prioritizing-simplity/>

April 20, 2020 by Drew DeVault

Prioritizing simplicity improves performance and reliability

We recently put together some automated testing which evaluates the performance of various software forges without bias¹: the [Software Forge Performance Index](#). The goal is to push our community of software forges to strive for higher performance, to tighten your workflow loop and to better service communities without access to high-speed internet or newer computer hardware. I also included results for accessibility testing, hoping that we can push each other to improve on that front as well.

These tests show that SourceHut has room for improvement. For one, some important features are conspicuously absent, like a git blame view. GitHub beats out our performance at rendering commits and tickets, and on several pages GitHub and Bitbucket both have better accessibility scores than the equivalent sr.ht page. But the overall results are clear: SourceHut is the best performing code forge, and by a wide margin. The data also shows that our approach delivers the best reliability: our friends at GitHub and GitLab have struggled with outages [15 of the last 90 days](#) and [18 of the last 90 days](#), respectively. SourceHut has had [two outages in 2020](#), both of which were planned and announced a week in advance, and only one of which affected more than one subsystem.

The secret is, as you may have guessed, to prioritize simplicity. It's all too easy for a development team to chase after shiny features — I know because it tempts me, too. But sooner or later the chickens come home to roost, and you have a giant single-page application downloading a megabyte

[Give feedback about this page](#)

Building a resilient frontend using progressive enhancement

From:

Last updated:

[Technology community \(frontend development\)](#)

5 months ago

Page contents:

- [Start with HTML](#)
- [Using interactive elements](#)
- [Adding the extras](#)
- [Building more complex services](#)
- [Testing your service](#)
- [Do not assume users turn off CSS or JavaScript](#)
- [Case studies and related guides](#)

Progressive enhancement is a way of building websites and applications. It's based on the idea that you should start by making your page work with just HTML, before adding anything else like Cascading Style Sheets (CSS) and JavaScript.

This is because HTML is the most resilient layer. If the HTML fails there's no web page. Should the CSS or JavaScript fail, the HTML will still render correctly.

Using progressive enhancement means your users will be able to do what they need to do if any part of the stack fails. Building your service using progressive enhancement will:

- make your service more resilient
- mean your service's most basic functionality will work and meet the core needs of the user
- improve accessibility by encouraging best practices like [writing semantic markup](#)
- help users with device or connectivity limitations to use your service

<https://www.gov.uk/service-manual/technology-using-progressive-enhancement>

Designed to last

- **Return to vanilla HTML/CSS**
- **Don't minimize that HTML**
- Prefer one page over several
- End all forms of hotlinking
- Stick with the 13 web safe fonts +2
- Obsessively compress your images
- Eliminate the broken URL risk

A Manifesto for Preserving Content on the Web

This Page is Designed to Last

By [Jeff Huang](#) on 2019-12-19

For a professor, the end of the year is an opportunity to clean up and reset for the upcoming new semester. I found myself clearing out old bookmarks—yes, bookmarks: that formerly beloved browser feature that seems to have lost the battle to 'address bar autocomplete'. But this nostalgic act of tidying led me to despair.

Bookmark after bookmark led to dead link after dead link. Vanished are amazing pieces of writing on kuro5hin about tech culture, and a collection of mathematical puzzles and their associated discussion by academics that my father introduced me to; gone are Woodman's Reverse Engineering tutorials from my high school years, where I first tasted the feeling of dominance over software; even my most recent bookmark, a series of posts on Google+ exposing usb-c chargers' non-compliance with the specification, disappeared.

This is more than just link rot, it's the increasing complexity of keeping alive indie content on the web, leading to a reliance on platforms and time-sorted publication formats (blogs, feeds, tweets).

Writing HTML in HTML

Published on 2019-06-19

I've just finished the final rewrite of my website. I'm not lying: this is the last time I'm ever going to do it. This website has gone through countless rewrites – from PHP to WordPress to Jekyll to multiple static site generators of my own – but this is the final one. I know so, because I've found the ultimate method for writing webpages: **pure HTML**.

It sounds obvious, but when you think about how many static site generators are being released every day – [the list](#) is practically endless – it's far from obvious. Drew DeVault recently [challanged](#) people to create their own blog, and he didn't even mention the fact that one could write it in pure HTML:

If you want a hosted platform, I recommend write.as. If you're technical, you could build your own blog with Jekyll or Hugo. GitHub offers free hosting for Jekyll-based blogs.

Now, there's nothing wrong with Jekyll or Hugo; it's just interesting that HTML doesn't even get a mention. And of course, I'm not criticizing Drew; I think the work he's doing is great. But, just like me and you, he is a child of his time.

That's why I'm writing this blog post – to turn the tide just a little bit.

So what are the benefits of writing HTML in HTML?

There's one less level of indirection.

This point is simple, but hugely important.

Normal <a> tag

3.1 seconds

The screenshot shows the MDN web docs homepage. At the top, there's a navigation bar with links for "Technologies", "References & Guides", "Feedback", and "Sign in". Below the navigation is a search bar with the placeholder "Search". The main content area features a large heading "Element" and a sub-section titled "Languages". A detailed description of the `Element` class follows, explaining its role as the base class for all objects in a `Document`. The text states that it only has methods and properties common to all kinds of elements, with more specific classes inheriting from it.

Element

Languages

Element is the most general base class from which all objects in a `Document` inherit. It only has methods and properties common to all kinds of elements. More specific classes inherit from `Element`. For example, the `HTMLElement` interface is the base interface for HTML elements, while the `SVGElement` interface is the basis for all SVG elements. Most functionality is

JavaScript navigation

5.2 seconds

This screenshot shows the same MDN web docs page, but with a noticeable performance difference. The "Feedback" link in the top navigation is highlighted in yellow, indicating it was the target of a click. The page content has shifted to the right, revealing a sidebar on the left side of the main content area. This sidebar contains links for "Technologies", "References & Guides", and "Feedback". The main content area now displays the "Element" page, with its descriptive text visible. The overall layout is wider than the first screenshot due to the sidebar.

Feedback

Element

Element is the most general base class from which all objects in a `Document` inherit. It only has methods and properties common to all kinds of elements. More specific classes inherit from `Element`. For example, the `HTMLElement` interface is the base interface for HTML elements, while the `SVGElement` interface is the basis for all SVG elements. des questions ou remarques ?

Conclusion ?

Conclusion ?

une histoire de choix

Conclusion ?

choisir c'est renoncer

Forever free

No ads.

No pay wall.

No data centers.

No cloud. No cookies.

No company. No investors.

No token. No ICO. No blockchain.

No tracking. No spying. No analytics.

No tedious registration. No premium costs.

No annoying notifications, emails, and banners.

et vous ?

vous renoncez à
quoi ?

Forever free

No ads.

No pay wall.

No data centers.

No cloud. No cookies.

No company. No investors.

No token. No ICO. No blockchain.

No tracking. No spying. No analytics.

No tedious registration. No premium costs.

No annoying notifications, emails, and banners.

peut-être

à . . .

Élargir l'audience et réduire la fracture numérique

Applications plus résiliente en
environnement dégradé,
UX plus sobre et plus compréhensible

Améliorer l'accessibilité

Utilisation du texte
en priorité sur les autres média

Respecter la vie privée

Limitation des trackers et publicités
gourmands en ressources

Satisfaire et fidéliser des utilisateurs

UX centrée sur
les fonctionnalités essentielles

Assurer la pérennité des applications

Simplification fonctionnelle et technique,
moins de ressources nécessaires

~~faire le bon choix~~

prendre conscience de
ses choix

prendre conscience de
ce à quoi on renonce

There is no silver
bullet

choisir c'est renoncer

Fred Brooks, 1986

There is no silver
bullet

choisir c'est renoncer

N'hésitez pas, vraiment

Merci ❤
